Leading the worldwide adoption of natural gas.

When it comes to your transportation fleet, it’s time to think clean and make a change. Natural gas is a safe, effective and low-cost alternative to fuel buses, refuse vehicles and heavy-duty trucks.

Agility Fuel Solutions is committed to making natural gas the logical choice for fueling commercial vehicles. It benefits the environment and makes good business sense.

Running your vehicles on natural gas not only reduces harmful emissions; it also helps you manage costs over time. Being an abundant domestic resource, the price of natural gas has less volatility, which means more consistency for your bottom line.

Fueling your fleet with natural gas isn’t just a savvy, bottom-line business move; it also saves the environment and the communities you serve. In fact, for each mile you drive using natural gas as a fuel, there is approximately one pound of CO2 emissions saved. You’ll be driving towards a cleaner future.

### Emissions Reductions

Use of natural gas fuel reduces CO2 emissions by 27%.

- **1.06 lbs.** of CO2 emissions reduced per mile.

- **1,800,000,000 lbs.** of CO2 emissions reduced per year using Agility Fuel Solutions.

- **40%** reduction of Nitrogen Oxides (NOx). Currently, there is a game-changing reduction in emissions with natural gas engines reaching “near zero” NOx levels (0.02 grams) or 95% below EPA requirements.
Expert leaders in natural gas engineering.

At Agility Fuel Solutions, we take product design very seriously and push our engineering capabilities to the leading edge.

Our staff of dedicated natural gas engineers share one purpose: to create and design state-of-the-art, application-specific solutions for your exact transportation needs.

This means that we build high-performance products that are strong, durable and safe.

Products that lead the industry in uptime. Products that take less time to fill and less time to service and maintain. Products that perform at low pressure and in cold weather. Products that have been tested and validated by OEMs for the most demanding conditions.

Our expertly engineered systems and cylinders provide all of those things and more, but more importantly, they provide value. Your investment in Agility Fuel Solutions is an investment in assets that will increase your profitability over time.
A global leader in the industry.

Our superior engineering innovations and capabilities are only rivaled by our industry experience and expertise. As the most recognized brand in the industry, we’ve been doing business for over twenty years and have developed and produced heavy-duty natural gas fuel systems and cylinders at our modern production facilities in the United States, Brazil and Norway.

The recently built state-of-the-art, 204,000-square-foot production facility in Salisbury, North Carolina represents our deep commitment to our customers and to the development and adoption of natural gas as a transportation fuel. The first vertically integrated natural gas fuel system production facility of its kind, it unites the entire production process, including fabrication, an in-house paint shop, assembly and installation. This integrated approach ensures best-in-class products, quality and costs for all of our customers.
Teamwork

Industry Leaders

Strong Relationships

Strategic partnerships throughout the industry.

Agility Fuel Solutions has engaged with industry leaders in strategic relationships to benefit our customers.

We share a Center of Excellence with Hexagon Composites to ensure our customers are always at the forefront of gas storage technology. This collaboration is focused on research and development to stay ahead of the market with the latest weight, safety and fill solutions. Innovations through this center will be available exclusively on our fuel systems.

We are working with Cummins Inc., the world’s largest producer of diesel and natural gas-powered heavy-duty engines, to drive adoption of natural gas as a fuel and improve the natural gas vehicle user experience.

New technology-integrating software and hardware between natural gas engines and onboard fuel storage and delivery systems aims to significantly improve performance and uptime.

In addition, with our integrated systems, our customers will be able to obtain Agility Fuel Solutions parts and service from the extensive Cummins service network.
Service and support that leads the industry.

Upgrading and modernizing your entire trucking fleet is a big decision. But it’s a smart decision to run clean and we have the resources and know-how to make the transition as seamless and as easy as possible. Agility Fuel Solutions strives to ensure ease of use – we promise that your transition to natural gas fuel will be a smooth ride.

Our call center is unique in the industry and provides outstanding service and troubleshooting capabilities. In addition, our coordinated integration with Cummins and their field support means superior aftermarket assistance for your fleet.
Products that are built and designed to lead.

Our products are designed and engineered for durability, performance, safety and reliability, providing value and improved uptime. This translates to a lower total cost of ownership and higher profitability.

With over 35,000 vehicles and more than 240,000 Type 4 cylinders on the road, logging billions of miles annually, our experience in the industry is unparalleled. Our products are designed for the heavy-duty truck market and undergo a minimum of one million mile validation tests.

Safety is paramount throughout our research and development process and all of our products are put through rigorous fire and side-impact testing that leads the industry.

Agility Durability
- 35,000 natural gas-powered vehicles using our systems on the road
- More than 240,000 Type 4 cylinders manufactured
- Billions of miles traveled annually
- OEM tested and validated
- Industry-leading strength to weight ratio

Agility Performance
- Largest capacity per inch of frame rail
- Excellent performance at low pressures and in cold weather
- Designed to be aerodynamic and space-efficient for less drag and more fuel efficiency
- Reduced inspection times

Agility Safety
- Side-impact and fire testing integral to our product development process
- Pressure relief devices (PRD) engineered to maximize safety in case of fire
- Manual shut-off valves for first responders
- Drive away protection utilizing ignition kill caps
Performing under pressure.

We deliver a clean alternative to diesel. With our products, you will enjoy all of the benefits of plentiful, domestic natural gas. Fuel expenses will drop and remain consistent, all while reducing harmful CO2 emissions.

Unmatched Expertise
Our engineers design and build application-specific systems and cylinders that are strong, durable and safe. Over twenty years of experience goes into our products and we have more heavy-duty natural gas fuel systems in operation than any other company.

Industry Leadership
We are committed to establishing natural gas as the premier fuel for commercial vehicles. Our manufacturing facilities span North America, South America and Europe and our sales offices are worldwide. Our vertically integrated North Carolina plant is the first of its kind, offering cost-effective products that are best in class, built to the highest quality standards and meet OEM requirements.

Strategic Partnerships
Teaming up with Cummins and Hexagon Composites ensures consistent quality and continued innovation with a focus on the user experience.

Unrivaled Service and Support
More uptime means a better bottom line. Our call center is unique in the industry and our extensive network of field support ensures your fleet has the aftermarket assistance it needs.

Tested and Proven
Our products go through stringent durability and safety testing and are engineered for high performance. Over 35,000 heavy-duty systems and more than 240,000 cylinders travel billions of miles annually on North America’s roads.

Increased Profitability Over Time
Our products take less time to fill, service and maintain while ensuring fuel costs remain low and steady, despite external factors.

A Clean Bottom Line and a Clean Environment
With Agility Fuel Solutions as your fuel partner, your fleet will thrive from optimal cost of ownership and you’ll join us in leading the way to a cleaner future.
